

JAYPEE UNIVERSITY OF INFORMATION TECHNOLOGY, WAKNAGHAT

TEST -2 EXAMINATION- 2024

Ph.D (All Branches)

COURSE CODE (CREDITS):18P1WGE101(03)

MAX. MARKS: 25

COURSE NAME: Research Methodologies Incl Quantitative Methods & Comp Applications

COURSE INSTRUCTORS: RKB,RAD,NKT

MAX. TIME: 1 Hour 30 Minutes

Note: (a) All questions are compulsory.

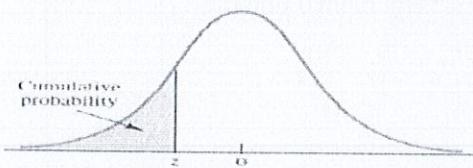

(b) The candidate is allowed to make Suitable numeric assumptions wherever required for solving problems

Q.No	Question	Marks
Q1	<p>Answer the following questions:</p> <p>(a) Write the rotation matrix which will transform the vector $[1, 1]$ to $[-1, 1]$.</p> <p>(b) For the following matrix A, if the eigenvalues are 4 and 8, then find the values of x and y:</p> $A = \begin{bmatrix} 2 & 3 \\ x & y \end{bmatrix}$ <p>(c) Find the Eigen values and Eigen vectors of matrix $\begin{pmatrix} 5 & 3 \\ 3 & 5 \end{pmatrix}$</p>	6
Q2	<p>Investigate for what value of α, β the simultaneous equations $x + y + z = 6$, $x + 2y + 3z = 10$, $x + 2y + \alpha z = \beta$, have</p> <p>(a) no solution (b) unique solution.</p>	3
Q3	<p>Genetic researchers are often interested in modeling the occurrence of rare mutations in populations. In a bioinformatics study, researchers are investigating a specific gene mutation that occurs with a probability of 0.05 in a certain population. Suppose they sample 50 individuals from this population.</p> <p>(a) What is the probability that exactly 3 individuals in the sample carry the gene mutation?</p> <p>(b) What is the expected number of individuals in the sample who carry the mutation?</p> <p>(c) Find the variance in the number of individuals who are expected to carry the gene mutation.</p>	4
Q4	<p>The time, X, in minutes, taken by the official staff to install a satellite dish may be assumed to be a normal random variable with <i>mean</i> 134 and <i>standard deviation</i> 16.</p> <p>(a) Determine $P(X < 150)$.</p> <p>(b) Determine, to one decimal place, the time exceeded by 10 percent of installations.</p>	4

Q5	Solve the linear programming problem by Simplex method $\begin{aligned} \text{Max } Z &= 7x_1 + 5x_2 \\ \text{s/t } x_1 + 2x_2 &\leq 6, \quad 4x_1 + 3x_2 \leq 12 \\ x_1, x_2 &\geq 0 \end{aligned}$	[3]
Q6	(a) Write the mathematical form of Assignment problem. (b) Solve the assignment problem	[1+4]

Person/Job	J1	J2	J3	J4	J5
A	20	15	18	20	25
B	18	20	12	14	15
C	21	23	25	27	25
D	17	18	21	23	20
E	18	18	16	19	20
