

JAYPEE UNIVERSITY OF INFORMATION TECHNOLOGY, WAKNAGHAT

TEST -3 EXAMINATION- 2025

B. Tech- IV Semester (CSE/IT/BT/BI)

COURSE CODE (CREDITS): 18B11CI412(3)

MAX. MARKS: 35

COURSE NAME: Design and Analysis of Algorithms

COURSE INSTRUCTORS: Dr. Aman Sharma, Dr. Arvind Kumar, Mr. Ravi Sharma, Mr.

Saurav Singh

MAX. TIME: 2 Hours

*Note: (a) All questions are compulsory.*

*(b) The candidate is allowed to make Suitable numeric assumptions wherever required for solving problems*

Q.No	Question	CO	Marks
Q1	<p>1.1.</p> <p>a) Explain how the Floyd-Warshall algorithm detects the presence of a negative weight cycle in a graph. (2 marks)</p> <p>b) Consider the following directed graph with 4 vertices. Use the Floyd-Warshall algorithm to compute the final distance matrix. Also, state whether the graph contains a negative weight cycle. (3 marks)</p> <p>0 1 2 3</p> <p>0 [ 0 1 <math>\infty</math> <math>\infty</math> ]</p> <p>1 [ <math>\infty</math> 0 -1 <math>\infty</math> ]</p> <p>2 [ <math>\infty</math> <math>\infty</math> 0 -1 ]</p> <p>3 [ -1 <math>\infty</math> <math>\infty</math> 0 ]</p> <p>1.2</p> <p>Given the recurrence relation:</p> <p><math>T(n) = 2T(n/2) + n \log n</math></p> <p>a) Use the <b>Recursion Tree Method</b> to guess the time complexity of the recurrence. Show the pattern clearly. (2 marks)</p> <p>b) State whether <b>Master's Theorem</b> can be applied to this recurrence. If yes, solve it using the theorem; if not, explain why. (2 marks)</p>	4	9
Q2	<p>2.1</p> <p>You are given the following weighted undirected graph:</p> <p>Vertices: {A, B, C, D, E}</p> <p>Edges with weights:</p> <p>A - B (1), A - C (3), B - C (1), B - D (4), C - D (1), D - E (2), C - E (5)</p> <p>a) Using Kruskal's algorithm, construct the Minimum Spanning Tree (MST). Show the order in which edges are added and justify cycle checks using the Union-Find approach. (3 marks)</p> <p>b) Using Prim's algorithm, construct the MST starting from vertex A. Show the step-by-step process of selecting the next minimum edge and the vertices included at each step. (3 marks)</p> <p>2.2</p>	3	9

<p>a) Write the average case time complexity of the following sorting algorithms: (1 mark)</p> <ul style="list-style-type: none"> <li>i) Bubble Sort</li> <li>ii) Insertion Sort</li> <li>iii) Selection Sort</li> <li>iv) Heap Sort</li> </ul> <p>b) Briefly explain why Heap Sort is more efficient than Bubble Sort for large datasets. (1 mark)</p> <p>c) Which of the above algorithms is best suited for nearly sorted data, and why? (1 mark)</p>														
<p><b>3.1</b></p> <p>a) Define the following complexity classes with clear distinctions: (3 marks) P, NP, NP-complete, NP-hard</p> <p>b) Suppose a new algorithm is discovered that solves an NP-complete problem in polynomial time.</p> <ul style="list-style-type: none"> <li>i. What are the implications of this discovery on the P vs NP question? (3 marks)</li> <li>ii. What effect does it have on all other NP-complete problems?</li> <li>iii. Can NP-hard problems now be solved in polynomial time? Justify your answer.</li> </ul>	2	8												
<p><b>3.2</b></p> <p>a) Identify which algorithm design paradigm (Divide and Conquer, Greedy, or Dynamic Programming) is best suited for solving the following problems. Justify your answer briefly. (1 mark)</p> <ul style="list-style-type: none"> <li>i) Merge Sort</li> <li>ii) Fractional Knapsack Problem</li> </ul> <p>b) Briefly explain how the Divide and Conquer approach is applied in solving the Maximum Subarray Problem (Kadane's algorithm). (1 mark)</p>														
<p><b>4.1</b></p> <p>You are given the following items, each with a weight and a value, and a knapsack with a capacity of 5 units:</p> <table border="1" data-bbox="260 1151 477 1397"> <thead> <tr> <th>Item</th> <th>Weight</th> <th>Value</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>1</td> <td>8</td> </tr> <tr> <td>2</td> <td>3</td> <td>6</td> </tr> <tr> <td>3</td> <td>4</td> <td>12</td> </tr> </tbody> </table> <p>a) Construct the dynamic programming table used to solve the 0/1 Knapsack problem for the given data. (3 marks)</p> <p>b) From the table, determine the maximum value that can be obtained and list the items included in the optimal solution. (2 marks)</p> <p><b>4.2</b></p> <p>a) List any three essential characteristics of a good algorithm. (1 mark)</p> <p>b) Define the following asymptotic notations and explain what aspect of algorithm performance they represent:</p> <ul style="list-style-type: none"> <li>i) Big-O (O)</li> <li>ii) Big-Ω (Omega)</li> <li>iii) Big-Θ (Theta) (2 mark)</li> </ul> <p>c) Describe the difference between best-case, average-case, and worst-case time complexity with an example. (1 mark)</p>	Item	Weight	Value	1	1	8	2	3	6	3	4	12	3	9
Item	Weight	Value												
1	1	8												
2	3	6												
3	4	12
