Contents

1. Introduction	1
1.1 What is Real Time?	2
1.2 Applications of Real-Time Systems	3
1.3 A Basic Model of a Real-Time System	8
1.4 Characteristics of Real-Time Systems	11
1.5 Safety and Reliability	15
1.5.1 How to Achieve High Reliability?	16
1.5.2 Software Fault-Tolerance Techniques	17
1.6 Types of Real-Time Tasks	19
1.7 Timing Constraints	22
1.7.1 Events in a Real-Time System	22
1.7.2 Classification of Timing Constraints	23
1.7.3 Examples of Different Types of Timing Constraints	25
1.8 Modelling Timing Constraints	27
<i>Summary</i>	<i>31</i>
<i>Exercises</i>	<i>31</i>
2. Real-Time Task Scheduling	35
2.1 Some Important Concepts	35
2.2 Types of Real-Time Tasks and Their Characteristics	38
2.3 Task Scheduling	40
2.3.1 A Few Basic Concepts and Terminologies	40
2.3.2 Classification of Real-Time Task Scheduling Algorithms	41
2.4 Clock-Driven Scheduling	43
2.4.1 Table-Driven Scheduling	43
2.4.2 Cyclic Schedulers	45
2.4.3 A Generalized Task Scheduler	50
2.4.4 Comparison of Cyclic with Table-Driven Scheduling	51
2.5 Hybrid Schedulers	52
2.6 Event-Driven Scheduling	52
2.7 Earliest Deadline First (EDF) Scheduling	55
2.7.1 Is EDF Really a Dynamic Priority Scheduling Algorithm?	56
2.7.2 Implementation of EDF	56
2.7.3 Shortcomings of EDF	57

- 2.8 Rate Monotonic Algorithm (RMA) 58
 - 2.8.1 Can the Achievable CPU Utilization Be Any Better Than What was Predicted? 66
- 2.9 Some Issues Associated with RMA 66
 - 2.9.1 Advantages and Disadvantages of RMA 67
 - 2.9.2 Deadline Monotonic Algorithm (DMA) 68
 - 2.9.3 Context Switching Overhead 68
 - 2.9.4 Self Suspension 69
 - 2.9.5 Self Suspension with Context Switching Overhead 71
- 2.10 Issues in Using RMA in Practical Situations 71
 - 2.10.1 Handling Critical Tasks with Long Periods 71
 - 2.10.2 Handling Aperiodic and Sporadic Tasks 72
 - 2.10.3 Coping with Limited Priority Levels 73
 - 2.10.4 Dealing with Task Jitter 76
 - Summary* 77
 - Exercises* 77

3. Handling Resource Sharing and Dependencies Among Real-Time Tasks

85

- 3.1 Resource Sharing Among Real-Time Tasks 86
- 3.2 Priority Inversion 86
- 3.3 Priority Inheritance Protocol (PIP) 89
- 3.4 Highest Locker Protocol (HLP) 92
- 3.5 Priority Ceiling Protocol (PCP) 95
- 3.6 Different Types of Priority Inversions Under PCP 96
- 3.7 Important Features of PCP 102
- 3.8 Some Issues in Using a Resource Sharing Protocol 103
 - 3.8.1 Using PCP in Dynamic Priority Systems 103
 - 3.8.2 Comparison of Resource Sharing Protocols 104
- 3.9 Handling Task Dependencies 104
 - Summary* 106
 - Exercises* 106

4. Scheduling Real-Time Tasks in Multiprocessor and Distributed Systems

111

- 4.1 Multiprocessor Task Allocation 112
- 4.2 Dynamic Allocation of Tasks 114
- 4.3 Fault-Tolerant Scheduling of Tasks 116
- 4.4 Clocks in Distributed Real-Time Systems 116
 - 4.4.1 Clock Synchronization 117

- 4.5 Centralized Clock Synchronization 117
- 4.6 Distributed Clock Synchronization 118
 - Summary* 121
 - Exercises* 121

5. Commercial Real-Time Operating Systems

123

- x 5.1 Time Services 124
 - 5.1.1 Clock Interrupt Processing 125
 - 5.1.2 Providing High Clock Resolution 125
 - 5.1.3 Timers 126
- ✓ 5.2 Features of a Real-Time Operating System 127
- 5.3 Unix as a Real-Time Operating System 129
 - 5.3.1 Non-Preemptive Kernel 130
 - 5.3.2 Dynamic Priority Levels 131
 - 5.3.3 Other Deficiencies of Unix 133
- 5.4 Unix-Based Real-Time Operating Systems 134
 - 5.4.1 Extensions to the Traditional Unix Kernel 134
 - 5.4.2 Host-Target Approach 134
 - 5.4.3 Preemption Point Approach 135
 - 5.4.4 Self-Host Systems 136
- 5.5 Windows as a Real-Time Operating System 139
 - 5.5.1 Important Features of Windows NT 140
 - 5.5.2 Shortcomings of Windows NT 141
 - 5.5.3 Windows NT versus Unix 142
- 5.6 POSIX 142
 - 5.6.1 Open Software 143
 - 5.6.2 Genesis of POSIX 143
 - 5.6.3 Overview of POSIX 144
 - 5.6.4 Real-Time POSIX Standard 144
- 5.7 A Survey of Contemporary Real-Time Operating Systems 145
 - 5.7.1 PSOS 145
 - 5.7.2 VRTX 146
 - 5.7.3 VxWorks 147
 - 5.7.4 QNX 147
 - 5.7.5 μ C/OS-II 148
 - 5.7.6 RT Linux 148
 - 5.7.7 Lynx 150
 - 5.7.8 Windows CE 150
- 5.8 Benchmarking Real-Time Systems 150
 - 5.8.1 Rheapstone Metric 151

- 5.8.2 Interrupt Processing Overhead 154
- 5.8.3 Tridimensional Measure 154
- 5.8.4 Determining Kernel Preemptability 154
- Summary* 155
- Exercises* 155

6. Real-Time Communication

159

- 6.1 Examples of Applications Requiring Real-Time Communication 160
- 6.2 Basic Concepts 162
 - 6.2.1 Types of Networks 162
 - 6.2.2 Quality of Service (QoS) 163
 - 6.2.3 Traffic Categorization 165
- 6.3 Real-Time Communication in a LAN 166
 - 6.3.1 LAN Architectures 167
- 6.4 Soft Real-Time Communication in a LAN 169
- 6.5 Hard Real-Time Communication in a LAN 171
 - 6.5.1 Global Priority-Based Scheduling 172
 - 6.5.2 Calendar-Based Protocol 176
- 6.6 Bounded Access Protocols for LANs 176
 - 6.6.1 IEEE 802.4 176
 - 6.6.2 RETHER 178
 - 6.6.3 Switched Real-Time Ethernet 179
- 6.7 Performance Comparison 180
- 6.8 Real-Time Communication Over Packet Switched Networks 183
 - 6.8.1 A Basic Model of Internet 183
 - 6.8.2 Traffic Characterization 184
- 6.9 QoS Framework 186
- 6.10 Routing 186
 - 6.10.1 Routing Algorithms 187
 - 6.10.2 Multicast Routing 188
- 6.11 Resource Reservation 188
 - 6.11.1 Resource reSerVation Protocol (RSVP) 189
- 6.12 Rate Control 190
 - 6.12.1 Service Discipline 191
 - 6.12.2 Traffic Distortion and Its Control 192
 - 6.12.3 Types of Service Disciplines 193
 - 6.12.4 Work Conserving Discipline 193
 - 6.12.5 Non-Work Conserving Disciplines 194

- 6.13 QoS Models 196
 - 6.13.1 Integrated Services 197
 - 6.13.2 Differentiated Services 197
- Summary* 198
- Exercises* 198

7. Real-Time Databases 204

- 7.1 Example Applications of Real-Time Databases 204
- 7.2 Review of Basic Database Concepts 206
- 7.3 Real-Time Databases 207
 - 7.3.1 Real-Time Database Application Design Issues 208
- 7.4 Characteristics of Temporal Data 208
 - 7.4.1 Temporal Consistency 209
- 7.5 Concurrency Control in Real-Time Databases 210
 - 7.5.1 Locking-Based Concurrency Control 211
 - 7.5.2 Optimistic Concurrency Control Protocols 214
 - 7.5.3 Speculative Concurrency Control 215
 - 7.5.4 Comparison of Concurrency Control Protocols 215
- 7.6 Commercial Real-Time Databases 216
 - Summary* 216
 - Exercises* 217
