DECLARATION

I hereby declare that the work reported in the B.Tech Project Report entitled **“Automation Testing- HC Facets with UFT”** submitted at **Jaypee University of Information Technology, Wagnaghat, India** is an authentic record of my work carried out under the supervision of Cognizant. I have not submitted this work elsewhere for any other degree or diploma.

Prashant Jaiswal
171048

This is to certify that the above statement made by the candidate is correct to the best of my knowledge.

Cognizant

Date:20/05/2021

Project Report Undertaking

I **Mr. /Ms.** Prashant Jaiswal, Roll No. 171048, Branch ECE is doing my internship with Cognizant from 27 February 2021 to 11 June 2021.

As per the procedure I have to submit my project report to the university related to my work that I have done during this internship.

I have compiled my project report. But due to COVID-

19 situation my project mentor in the company is not able to sign my project report.

So, I hereby declare that the project report is fully designed/developed by me and no part of the work is borrowed or purchased from any agency.

And I'll produce a certificate/document of my internship completion with the company to TnP Cell whenever COVID-19 situation gets normal.

Name-Prashant Jaiswal
Roll No-171048

ACKNOWLEDGEMENT

Our success of completion of our project required guidance from many individual and assistance from many people and we are extremely privileged to have have got this all along the completion of this project. We would like to express our special thanks of gratitude to our coordinator Dr. Rajiv Kumar ashis immense knowledge, profound experience and professional expertise in Data Quality Controlhas enabled me to complete this project successfully. Without his support and guidance, thisproject would not have been possible. I could not have imagined having a better supervisor in mystudy.who gave us the golden opportunity to do this wonderful project on the topic “Automation Testing”. We are also thankful to H.O.D Sir Dr. Rajiv Kumar whogave us moral support.

ABSTRACT

Micro Focus UFT One is instrument that utilizes computerize tests to discover issues of a test application. Unified Functional Testing (UFT) is an abbreviation for "Bound together Functional Testing." It was recently known as QTP (Quick Test Professional). Gen C learning program engages young talents with a comprehensive learning pathway, giving the millennials an opportunity to interact with Subject Matter Experts (SME), understand the corporate environment, and groom themselves Cognizant emphasizes on Learner Autonomy where students take charge of their own learning, with the available tools and resources. More focus is on "learning" than "teaching

Today, UFT is perhaps the most generally used business mechanized testing arrangements accessible. It's notable for its effortlessness of utilization and merchant support, just as a major local area of mechanization specialists. Accordingly, qualified UFT experts have consistently been popular.

CHAPTER 1

INTRODUCTION

Functional Testing Fundamentals

The Life Cycle for Software Development (SDLC) is an interaction for programming plan, improvement and testing. The SDLC offers top notch items that fulfill customer necessities and are finished on schedule and on time. The SDLC is a strategy for a product project inside a product firm. It is a finished strategy to show how explicit programming might be assembled, overseen, refreshed and improved. The existence cycle is a method for improving the nature of programming and the improvement process.

What is SDLC Model?

A framework containing the method sports and the tasks worried in the trends, operations and preservation of a software undertaking spanning the life of the system from the definition of its necessities to the termination of its use.

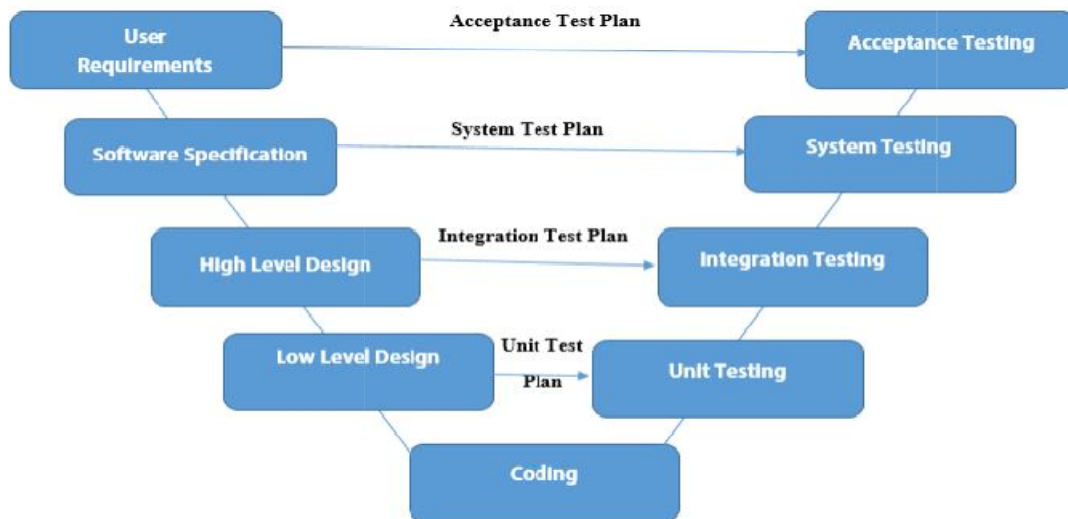

For item designers needing to assemble the best engineering for another item, SRS is an asset. In a DDS– Specification of the plan report, various options in contrast to the idea recommended are typically given and systematized by the standards set out in the SRS.

All key partners evaluate this DDS and select an item plan procedure dependent on a few highlights, for example, hazard the executives, item steadiness, plan adaptability, spending plan and timescales.

CHAPTER 2

Data Source (SQL + XML + JSON)

Before the engineer gets the work things for improvement, like the Requirements determination, Designs, and User Stories, they ought to be checked. Perceiving any vulnerability or clashing prerequisites now saves a ton of time during advancement and testing. Before the code incorporates/is prepared for testing, it goes through static examination (audits, walk-throughs, assessments, etc).

Confirmation is the term for this kind of assessment. During the advancement period of any work item, it is the way toward investigating the item.

To verify requirements:

This objective exhibits that perhaps the main parts of testing is to fulfill the needs of the customer. One of the objectives of programming testing is to keep away from issues right off the bat in the advancement interaction. The cost and exertion of identifying issues early sets aside a great deal of cash and time. Imperfection anticipation involves doing a main driver of recently found issues and afterward finding away explicit ways to stay away from comparative blunders from happening later on. Powerful testing helps in the making of a blunder free item. At the point when flaws are forestalled, the general imperfection include in the item is decreased, bringing about a greater item for the purchaser.

Planning

Examination of necessities is the most huge and principal phase of the SDLC. It is finished by the top individuals from the group with client criticism, outreach groups, market studies and experts from the business. These information are then used to characterize the center venture plan and complete item research drives in the financial, business and innovative fields.

Defining Requirements

The requests of the item should be fittingly determined, recorded and approved by the client or venture supervisors following the necessity examination. This is accomplished by utilizing a SRS (Software Requirement Specifications) record that incorporates all venture results to be set up and created through the entire task life cycle.

Designing the Product Architecture

For item designers needing to assemble the best engineering for another item, SRS is an asset. In a DDS – Specification of the plan report, various options in contrast to the idea recommended are typically given and systematized by the standards set out in the SRS.

Analysts look at the item and guarantee that the entirety of the specified guidelines are met.

Planning

each experiment, regardless of testing approach, ensure that each performed experiment is practically confirmed. A necessity detectability network (RTM) ought to likewise be made by the analyzer

to ensure that all experiments are planned to prerequisites. RTM is a useful asset for guaranteeing that experiments cover the entirety of the prerequisites.

To validate the test object:

Testing ensures the execution of necessities just as the confirmation that they work as expected by clients. Approval is the term for this sort of testing. It is the way toward assessing an item after it has been created. Approval may be done physically or consequently. It as often as possible uses an assortment of testing draws near, like Black Box, White Box, etc. Approval is frequently performed by analysts, despite the fact that clients can likewise approve the item as a component of User adequacy testing. The buyer is viewed as the lord in any firm.

To build confidence:

Improved programming quality is quite possibly the main objectives of programming testing. There are less defects in excellent programming. To put it another way, the more compelling the testing interaction is, the less blame will be found in the last yield. Thus, the general nature of the test thing will improve. Magnificent quality prompts higher consumer loyalty and less upkeep costs.

To prevent defects:

One of the objectives of programming testing is to keep away from issues right off the bat in the advancement interaction. The cost and exertion of identifying issues early sets aside a great deal of cash and time. Imperfection anticipation involves doing a main driver of recently found issues and afterward finding away explicit ways to stay away from comparative blunders from happening later on. Powerful testing helps in the making of a blunder free item. At the point when flaws are forestalled, the general imperfection include in the item is decreased, bringing about a greater item for the purchaser.

To find defects in product:

Another significant objective of programming testing is to discover all imperfections in an item. The objective of testing is to uncover however many imperfections as could be expected under the circumstances in a product item while likewise guaranteeing that the application addresses the client's issues. Deficiencies ought to be found as right on time as practical in the testing cycle.

To share information to stakeholders:

SQL DATATYPES

Numeric datatypes

- INT
- FLOAT(M,D)
- DECIMAL(M,D)

Date and time datatypes

- DATE
- DATETIME
- TIME
- YEAR

Joins

-join allow to retrieve data from multiple tables in a single select statement.

-To jointwo tablesthereneedstobearelatedcolumnbetweenthem. Types-

Innerjoin-Itwillretrievedataonlywhenthereismatchingvaluesinbothtables. Leftjoin-

Itwillretrievealldatafromthelefttableandmatchingrowsfromtheright table.

Rightjoin-Itwillretrievealldatafromtherighttableandmatchingrowsfromtheleft table.

Normalization

Levels-

1. 1st normal form(1NF)

2. 2nd normalform(2NF)

3. 3rd normalform(3NF)

Relationships

Tables are related through primary key and foreign key.

Types-

1. One to onerelationship

2. One to manyrelationship

3. Many to manyrelationship

Constraints

1. Notnull-Acolumncan'tcontainanynullvalues.

2. Unique-Acolumncan'tcontainanyduplicatevaluesofdata.

3. PrimaryKey-Acolumnthatuniquelyidentifyeachrowofdata.

4. ForeignKey-Acolumnwhichisrelatedtoaprimarkeyinanothertable.

5. Check-Controlthevalueshatcanbeinsertedintoacolumn

6. Default-Ifnovalueisinsertedintoacolumn,wecansetadefaultvalue.

Aggregate Functions

Perform a calculations on data within a column and returns one result.

Types-

1. COUNT

2. SUM

3. MAX ANDMIN

4. AVERAGE

CHAPTER 3

FUNCTIONAL TESTING

It is a kind of programming testing where the product framework is approved against the useful determination or necessities. Practical tests are utilized to approve the yield of a product program by giving sufficient information and contrasting it with the useful prerequisites.

Objective of this testing

- **Fundamental Usability:** It involves essential convenience testing of the framework
Mainline Functionality: It involves testing the essential elements of an application. It assists the analyzer with finding if a client could peruse across the screens absolutely or with no issue.
- **Accessibility:** It affirms that the framework is effectively open to the client.
- **Error Conditions:** Error conditions are checked utilizing testing strategies. It inspects if the fitting blunder messages are intro

NON-FUNCTIONAL TESTING

It is a sort of programming test that explores the non-useful components of a product program (execution, ease of use, constancy, etc).

Destinations of this testing

- Nonfunctional testing should assist with improving the program convenience, effectiveness, practicality, and conveyability.
- Assists in bringing down a danger or cost of non-useful pieces of the item all through creation.

- Improve the technique wherein the item is downloaded, designed, run and kept up
- Gain a superior comprehension of how items act and what innovations are being used.

Qualities of Non-practical testing

- This testing should be quantitative, hence emotional qualities like great, better, best, etc should not be utilized.
- Exact figures are probably not going to be found at the start of the prerequisite interaction.
- Prioritizing every single need is basic.
- Ascertain that quality ascribes are precisely perceived in Software Engineering.

1.6.2 Black Box Testing

BlackBox Testing is an assessing programming strategy which incorporates testing programming applications functionalities without understanding the code structure, execution subtleties or inner pathways. Discovery Testing is a kind of programming testing which centers around programming items yields and inputs and is completely determined by programming details. Another name for it is social trying.

Test object details

Name	Value
Description pr...	
- Visual relation...	
Visual relat...	(None)

Resolution Options

The selected object is identical in both files. No action needs to be taken.

The screenshot displays a software development environment with a menu bar (File, Edit, View, Search, Design, Record, Run, Resources, ALM, Tools, Window, Help) and a toolbar. The main workspace is titled "UFT Report: GUITest2 - Res12" and contains a code editor with the following script:

```
1 val_rate = DataTable.Value("Rate","Global")
2 'print val_rate
3
4 val_ppl = DataTable.Value("Principal","Global")
5 'print val_ppl
6
7 val_time = DataTable.Value("Time","Global")
8 'print val_time
9
10 val_ci = val_ppl * (1+(val_rate)/100) ^ val_time
11
12 print val_ci
```

Below the code editor is a "Data" table with the following content:

	A	B	C	D
P	Principal	Rate	Time	
2	232	3.26	4	
3	2556	7	5	
4	1322	6.5	6	
5	32.21	3.32	4.4	
6				
7				
8				

The interface also includes a Solution Explorer on the left, a Properties window on the right, and a status bar at the bottom showing "Ready" and "ln 1 col 1 ch 1".

The screenshot displays a software development environment with a blue header bar containing the menu items: File, Edit, View, Search, Design, Record, Run, Resources, ALM, Tools, Window, and Help. Below the header is a toolbar with various icons for file operations and testing. The main workspace is divided into several panes:

- Solution Explorer:** Shows a project structure with 'Solution Untitled', 'GUItest2', and 'Action1'.
- UFT Report:** Titled 'UFT Report : GUItest2 - Res12', it shows a 'Main' section with the following code:

```
1 val_rate = DataTable.Value("Rate","Global")
2 'print val_rate
3
4 val_ppi = DataTable.Value("Principal","Global")
5 'print val_ppi
6
7 val_time = DataTable.Value("Time","Global")
8 'print val_time
9
10 val_ci = val_ppi * (1+(val_rate)/100) ^ val_time
11
12 print val_ci
```
- Output:** A 'Print Log' window showing the results of the code execution:

```
263.764575420174
3584.9222236692
1928.98611602276
37.1879359103865
```
- Properties:** A vertical pane on the right side of the workspace.

At the bottom of the window, there is a status bar with the text 'Ready' on the left and 'ln 1 col 1 ch 1' on the right. The bottom pane also includes tabs for 'Solution Explorer', 'Toolbox', 'Output', 'Active Screen', 'Data', and 'Errors'.

```
1  
2 'Array Declaration  
3 Dim arr  
4  
5 'Initialise value to array  
6 arr = Array("The sky" , "at sunset" , "looked" , "like" , "a" , "carnivorous" , "flower")  
7  
8 'Loop to print each value of array  
9 For Iterator = 1 To UBound(arr) Step 1  
10     Print arr(iterator)  
11 Next  
12  
13 'To print size of array in msg box  
14 MsgBox "Size of Array is : "& UBound(arr)  
15
```

Project Report Undertaking

I Mr./Ms. Prashant Jaiswal -Roll
No. 171048 Branch ECE is doing
my internship with Cognizant from 20 February 2021
to 15 June 2021

As per procedure I have to submit my project report to the university related to my work that I have done during this internship.

I have compiled my project report. But due to COVID-19 situation my project mentor in the company is not able to sign my project report.

So I hereby declare that the project report is fully designed/developed by me and no part of the work is borrowed or purchased from any agency. And I'll produce a certificate/document of my internship completion with the company to TnP Cell whenever COVID-19 situation gets normal.

Signature Prashant Jaiswal

Name Prashant Jaiswal

Roll No. 171048

Date 20-05-2021

Welcome to your new class homepage! From the class homepage you can see all your assignments for your class, view additional assignment information, submit your work, and access feedback for your papers. X
Hover on any item in the class homepage for more information.

Class Homepage

This is your class homepage. To submit an assignment click on the "Submit" button to the right of the assignment name. If the Submit button is grayed out, no submissions can be made to the assignment. If resubmissions are allowed the submit button will read "Resubmit" after you make your first submission to the assignment. To view the paper you have submitted, click the "View" button. Once the assignment's post date has passed, you will also be able to view the feedback left on your paper by clicking the "View" button.
